## Introduction

<b>Content</b>	<p>This document contains an overview of all European Partnerships within Horizon Europe and clarifies possibilities for Danish universities and researchers within the partnerships, specifically in relation to possibilities of being part of the organizational structure of the European Partnerships, funding and influencing calls.</p>
<b>Purpose</b>	<p>This paper deals with the European Partnerships in Horizon Europe only and will assist universities to understand the possibilities for the involvement of researchers and universities.</p> <p>European Partnerships in Horizon Europe are an integral part of pillar II. Pillar II is characterised by European political agreed priorities implemented through the cluster-specific work programmes, Missions and the European Partnerships. The Partnerships take up 40% of the pillar II budget meaning that the Partnerships get an overall contribution from the European Commission of approx. 21 billion EUR in 2021-2027.</p> <p>Partnerships pertain to cluster 1: Health, cluster 4: Digital, Industry and Space, cluster 5: Climate, Energy and Mobility as well as cluster 6: Food, Bioeconomy, Natural resources, Agriculture and Environment. The European Partnerships are classified into three types: <b>Co-programmed</b>, <b>Co-funded</b> and <b>Institutionalized partnerships</b>.</p> <p>Universities can be involved in the European Partnerships in two ways: 1). Directly by applying for calls and/or 2). Joining the governing structure by being a member or possible working groups/advisory board etc. of the European Partnerships. Whether applying for calls or joining governing structures, European Partnerships offer European network opportunities for researchers and universities.</p> <p>It is relevant to know that often the calls of the European Partnerships have higher success rates and can offer higher overhead funding.</p> <p>For general information about European Partnerships see <a href="#">link. ERA-Learn</a> is also a rich source of information.</p> <p>Please note that pillar III's European Institute of Innovation and Technology Knowledge and Innovation Communities (KICs) are also considered European Partnerships. However, these Partnerships are fundamentally different and are currently outside of the scope of this document except for an overview at the end of this document.</p> <p><i>Special thanks for input and intelligence to Jonas Toft Ludvigsen from the Danish Ministry of Higher Education and Science.</i></p>

### Color codes in the document:

	Co-Programmed Partnerships
	Co-Funded Partnerships
	Institutionalized Partnerships (Article 185/187)
	Institutionalized Partnerships (EIT KICs)

European Partnerships in Horizon Europe			
	<u>Co-Programmed Partnerships</u>	<u>Co-funded</u>	<u>Institutionalized Partnerships</u>
<b>General information</b>	<p>Co-programmed Partnerships between the Commission and mostly private (and sometimes public) partners. A memorandum of understanding is the basis for the cooperation in these partnerships, as it specifies the partnership's objectives, the commitments from both sides and the governance structure. These partnerships are implemented through open calls in the Horizon Europe work programmes for the relevant clusters, formulated by the partnership but typically open to all.</p> <p>These Partnerships follow the contractual Public-Private-Partnerships (cPPPs) under H2020 ex: AI-Data-Robotics, Made in Europe, BATT4EU, Zero-emission waterborne transport.</p>	<p>Co-funded Partnerships are based on grant agreements between the Commission and consortia of partners. The Partnership outlines objectives, key performance and impact indicators, and outputs to be delivered, based on the commitment of the partners and integration of their relevant activities. This type of European Partnership is suited to public authorities, but it is also possible to include foundations and international partners.</p> <p>These Partnerships are the successors of the ERA-NETs under H2020 ex: Personalized Medicine, ERA for Health, Clean Energy Transition, Water4All.</p>	<p>Institutionalized Partnerships are based on individual legal acts and have multiannual agreements. These partnerships also include the KICs in pillar III.</p> <p>Article 185 institutionalized partnerships are collaborations between public actors, while article 187 institutionalized partnerships are collaborations between public and private actors. Many of these partnerships have representatives from academia, for example through an umbrella organization. Information about governance structure and membership can usually be found on the Partnership websites.</p> <p>Clean Hydrogen is as an example the successor of Fuel Cells and Hydrogen Joint Undertaking under H2020.</p>
<b>Possibilities to Influence calls through the European Partnership</b>	<p>Co-Programmed Partnerships usually require a membership fee either economically or in-kind.</p> <p>Universities can influence the formulation, aim and direction of future calls by getting on board the Partnership structure (governing board/ working groups etc.) or through the Programme Committee where DK is officially represented. DK universities have possibilities to provide their input to the Programme Committee through the Danish reference group structure.</p>	<p>Influence through the national funding body - typically the Innovation Fund Denmark. Further, the Partnership structure often allows for influence through participation in the working groups.</p>	<p>Possibilities to influence these European Partnerships vary.</p> <p>Some European Partnerships have independent governing boards for which researchers can apply to become a member.</p> <p>For KICs membership is based on annual fees - often significant annual fees for the participating institutions.</p>
<b>Funding eligibility through calls</b>	<p>Universities and researchers are eligible for funding and eligible to apply for all calls.</p>	<p>Funding for universities and researchers is possible if DK participates and contributes to the call, or if call provisions allow for funded participation. See flagged co-funded Partnerships</p>	<p>Funding for universities and researchers is by default possible unless derogations in the basic act or in the annual work programme limit eligibility for funding.</p>
<b>Funding rate through calls</b>	<p>Universities and researchers can typically expect a 100% funding rate. Companies can have a lower funding rate (60% is being piloted in Horizon Europe).</p>	<p>Up to 100% depending on the national funding body.</p> <p>Co-funded Partnerships where e.g the Innovation Fund Denmark participates with funding offer 90% funding for universities and researchers as well as an overhead rate of 40%. For more information about guidelines for Partnerships co-funded by Innovation Fund Denmark see <a href="#">link</a>.</p>	<p>Varying funding rates, but in general, Institutionalized Partnerships follow Horizon Europe rules and universities typically get 100%. Exceptions can occur.</p>
<b>Publication of Call</b>	<p>Calls are published through the cluster specific work programmes at <a href="#">the Funder and Tenders portal</a> as well as on the individual partnership's website. .</p>	<p>Calls are published on the European Partnership websites and on national funder's website.</p>	<p>Calls are published on the European Partnership websites and <a href="#">the Funder and Tenders portal</a>.</p>
<b>Additional criteria</b>		<p>The Innovation Fund Denmark currently requires that the Danish side of the consortium includes at least one non-academic partner. This is under review (Summer 2022).</p>	
<b>Additional information</b>		<p>In Denmark co-funded partnerships have mirror groups linked to the cluster reference groups. For more information about mirror-groups contact the UFM NCP for the relevant cluster.</p>

## Annex: Pending issues / Remaining questions

Below list shares the open issues which we seek to answer as soon as possible

- 1) Is it correct that not all grants received under Horizon Europe partnerships are deducted from the national university funding (basismidlerne)? If so please specify which types of partnerships and/or grants are exempted.
- 2) Are there higher success rates in the calls in which the Innovation Fund Denmark participates than other European Partnerships?
- 3) Who funds High Performance Computing and European Metrology (art 185)?
- 4) The fact that future co-funded partnerships are published as topics in the relevant thematic cluster in pillar II is very confusing for the average researcher who might assume that the topic is a normal topic which can be applied for in a straight forward manner. The truth is that co-funded partnerships are prepared years ahead either in previous partnerships or CSAs. A consortium of such relevant parties will after successful evaluation establish the partnership on the basis of a grant agreement with the European Commission. This process is only the establishment of the partnership, once the partnership is running calls are published as described in the introduction to this document.
